ON Semiconductor®

January 2017

FDB070AN06A0_F085
N-Channel PowerTrench® MOSFET
60V, 80A, 7mΩ

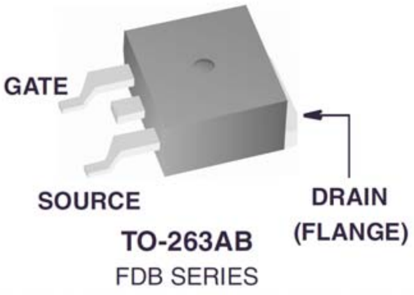
Features

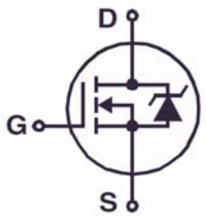
- $r_{DS(ON)}$ = 6.1mΩ (Typ.), V_{GS} = 10V, I_D = 80A
- $Q_{g(tot)}$ = 51nC (Typ.), V_{GS} = 10V
- Low Miller Charge
- Low Q_{RR} Body Diode
- UIS Capability (Single Pulse and Repetitive Pulse)
- Qualified to AEC Q101
- RoHS Compliant

Formerly developmental type 82567

Applications

- Motor / Body Load Control
- ABS Systems
- Powertrain Management
- Injection Systems
- DC-DC converters and Off-line UPS
- Distributed Power Architectures and VRMs
- Primary Switch for 12V and 24V systems





Ordering Information

Device	Output Voltage	Marking	Package	Shipping
FDB070AN06A0_F085	TBD	FDB070AN06A0	TO-263AB	Tape and Reel

Absolute Maximum Ratings T_C = 25℃ unless otherwise noted

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Ratings	Unit
V_{DSS}	Drain to Source Voltage	60	V
V_{GS}	Gate to Source Voltage	±20	V
I_D	Drain Current Continuous (T_C < 97℃, V_{GS} = 10V)	80	A
	Continuous (T_A = 25℃, V_{GS} = 10V, $R_{\theta JA}$ = 43℃/W)	15	A
	Pulsed	Figure 4	A
E_{AS}	Single Pulse Avalanche Energy (1)	190	mJ
P_D	Power dissipation	175	W
	Derate above 25℃	1.17	W/℃
T_J, T_{STG}	Operating and Storage Temperature	-55 to 175	℃

Thermal Characteristics

$R_{\theta JC}$	Thermal Resistance Junction to Case TO-220,TO-263	0.86	℃/W
$R_{\theta JA}$	Thermal Resistance Junction to Ambient TO-220,TO-263 (2)	62	℃/W
$R_{\theta JA}$	Thermal Resistance Junction to Ambient TO-263, 1in^2 copper pad area	43	℃/W

Notes:

1. Starting T_J = 25 ℃, L = 93 μH, I_{AS} = 64A.
2. Pulse width = 100s.

This product has been designed to meet the extreme test conditions and environment demanded by the automotive industry. For a copy of the requirements, see AEC Q101 at: http://www.aecouncil.com/
Reliability data can be found at: http://www.onsemi.com/products/discrete/reliability/index.html.
All On Semiconductor products are manufactured, assembled and tested under ISO9000 and QS9000 quality systems certification.

Electrical Characteristics T_C = 25℃ unless otherwise noted

Symbol	Parameter	Test Conditions	Min.	Typ.	Max.	Units
Off Characteristics						
B_{VDSS}	Drain to Source Breakdown Voltage	I_D = 250 μA, V_{GS} = 0 V	60			V
I_{DSS}	Zero Gate Voltage Drain Current	V_{DS} = 50 V V_{GS} = 0 V			1	μA
		T_C = 150 ℃			250	
I_{GSS}	Gate to Source Leakage Current	V_{GS} = ±20 V			±100	nA
On Characteristics						
$V_{GS(TH)}$	Gate to Source Threshold Voltage	V_{GS} = V_{DS}, I_D = 250μA	2		4	V

Thermal Resistance vs. Mounting Pad Area

The maximum rated junction temperature, T_{JM}, and the thermal resistance of the heat dissipating path determines the maximum allowable device power dissipation, P_{DM}, in an application. Therefore the application's ambient temperature, T_A(℃), and thermal resistance $R_{\theta JA}$(℃/W) must be reviewed to ensure that T_{JM} is never exceeded.

Equation 1 mathematically represents the relationship and serves as the basis for establishing the rating of the part.

$$P_{DM} = \frac{(T_{JM} - T_A)}{R_{\theta JA}} \qquad \text{(EQ. 1)}$$

In using surface mount devices such as the TO-263 package, the environment in which it is applied will have a significant influence on the part's current and maximum power dissipation ratings. Precise determination of P_{DM} is complex and influenced by many factors:

1. Mounting pad area onto which the device is attached and whether there is copper on one side or both sides of the board.
2. The number of copper layers and the thickness of the board.
3. The use of external heat sinks.
4. The use of thermal vias.
5. Air flow and board orientation.
6. For non steady state applications, the pulse width, the duty cycle and the transient thermal response of the part, the board and the environment they are in.

On Semiconductor provides thermal information to assist the designer's preliminary application evaluation. Figure 21 defines the $R_{\theta JA}$ for the device as a function of the top copper (component side) area. This is for a horizontally positioned FR-4 board with 1oz copper after 1000 seconds of steady state power with no air flow. This graph provides the necessary information for calculation of the steady state junction temperature or power dissipation. Pulse applications can be evaluated using the On Semiconductor device Spice thermal model or manually utilizing the normalized maximum transient thermal impedance curve.

Thermal resistances corresponding to other copper areas can be obtained from Figure 21 or by calculation using Equation 2 or 3. Equation 2 is used for copper area defined in inches square and equation 3 is for area in centimeters square. The area, in square inches or square centimeters is the top copper area including the gate and source pads.

$$R_{\theta JA} = 26.51 + \frac{19.84}{(0.262 + Area)} \qquad \text{(EQ. 2)}$$

Area in Inches Squared

$$R_{\theta JA} = 26.51 + \frac{128}{(1.69 + Area)} \qquad \text{(EQ. 3)}$$

Area in Centimeters Squared

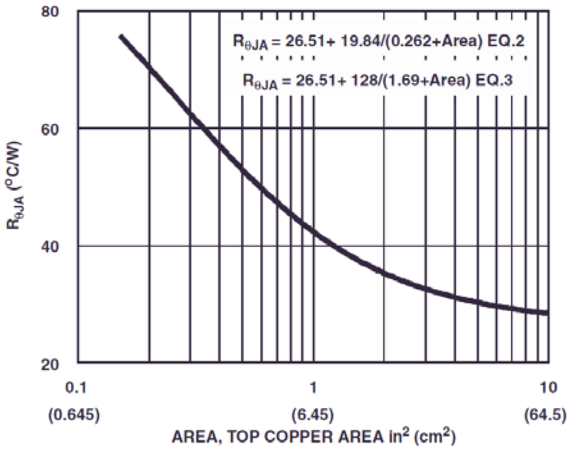

Figure 21. Thermal Resistance vs Mounting Pad Area
